TAMU CSCE-636

Brody Jordan

Fall 2025

Acknowledgements

These notes were compiled from the course materials for CSCE-636 (Deep Learning) taught by Dr. Anxiao Jiang at Texas A&M University during the Fall 2025 semester. It is worth mentioning that this course was ONLINE so lecture dates are not consistent and fixed. Each *chapter*, therefore, is based on material sectioning outline in the course syllabus. Any significant diverges from the course syllabus, whether at my own discretion or due to changes in the course structure, will be noted here and in the preamble of each chapter.

Deep Learning (CSCE-636)

	Instructor: Dr. Anxiao Jiang
	Semester: Fall 2025
	Time: ONLINE
	Location: ONLINE

Description: Basic concepts in neural computing; functional equivalence and convergence properties of neural network models; associative memory models; associative, competitive and adaptive resonance models of adaptation and learning; selective applications of neural networks to vision, speech, motor control and planning; neural network modeling environments.
